fluid & gas handling  
hydraulics  
pneumatics  
process control  
sealing & shielding

ENGINEERING YOUR SUCCESS.

# Keep Your Car Wash Running

Car wash owners and operators know that when their equipment stops working, they stop earning a living. Car care equipment manufacturers know that their reputations depend on the reliability of the components engineered into their systems.

At Parker, we understand your needs. We provide the quality motion-control and fluid-system products and services you need to sustain and grow your business. From the initial pre-soak right through to the final wipe-down station, Parker is there to keep your systems in motion.

Parker provides all of these products through the largest motion components and systems distribution network in the world. With more than 7,500 stocking distributors in 43 countries, Parker products are available when and where you need them.

# Use Reliable Parker Components to Maintain Your Car Care System Uptime

- High-pressure hose assemblies manufactured to exceed your water-blast and hydraulic fluid-power specifications

- Fittings, adapters and quick-disconnect couplings for leak-free pressurized connections

- Hydraulic pumps and motors designed to keep your conveyors moving and brushes turning

- Pneumatic cylinders, rotary actuators and valves that precisely position the brushes, spray arches and blowers to maximize the performance of all your critical stations

- Water purification products that enhance the effectiveness of your reverse osmosis and reclaim systems. Our hydraulic and air filtration products remove water and contaminants—extending the work-life of your equipment.

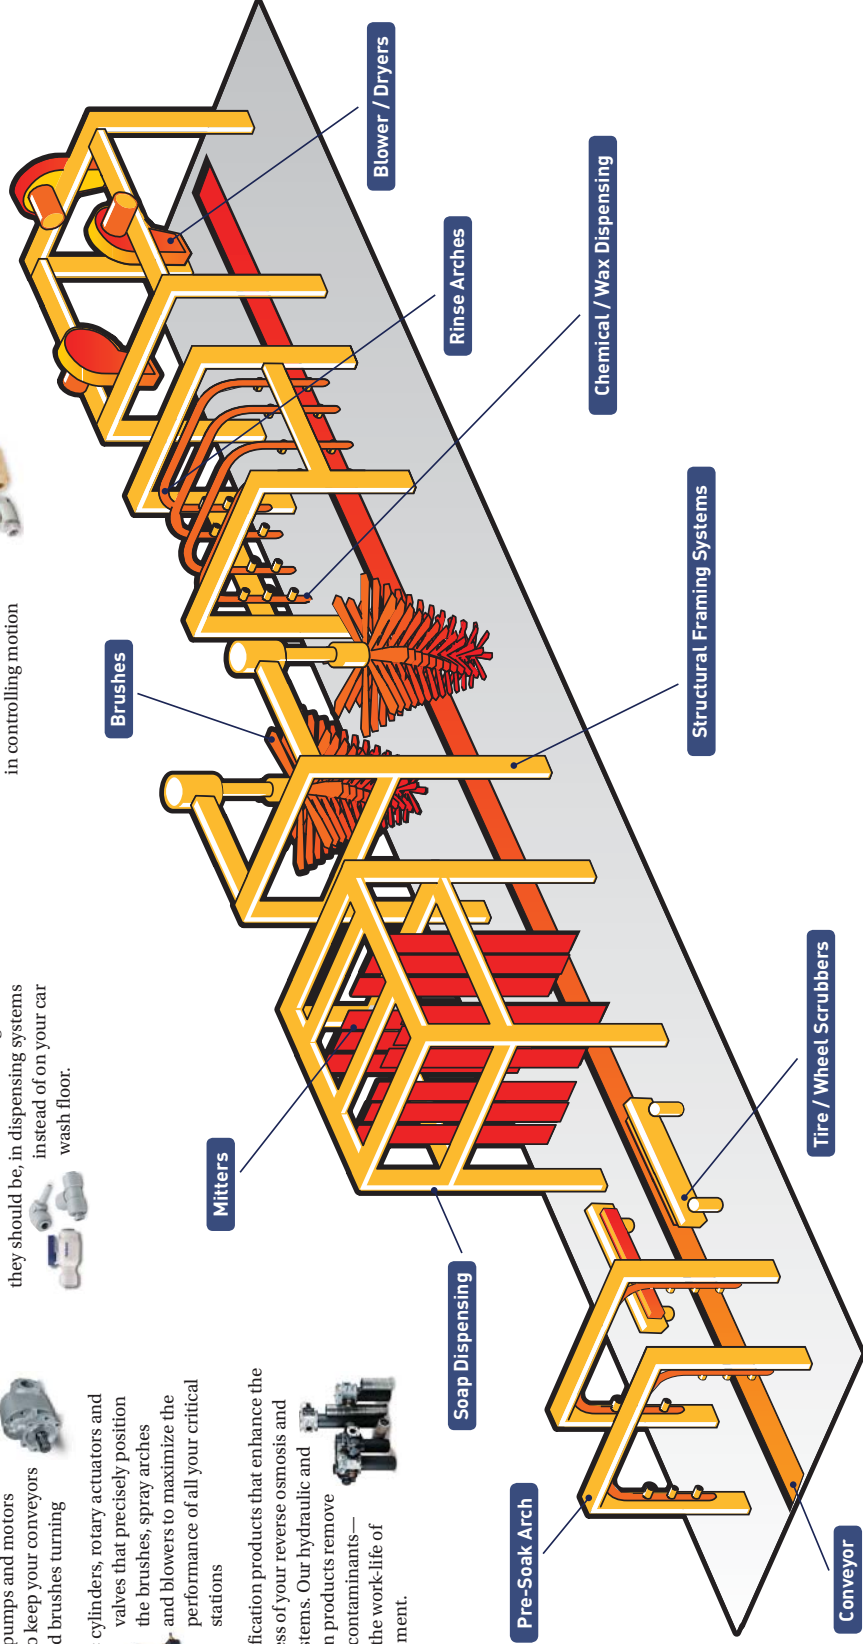

- Custom-built power units that consistently perform as expected, wash-after-wash

- Thermoplastic tubing, fittings and ball valves that offer unequalled fluid compatibility. Your expensive detergents and chemicals are contained right where they should be, in dispensing systems instead of on your car wash floor.

- Brass and stainless steel solenoid valves for a broad range of applications including pre-soak, soap dispensing, spot-free rinsing and more, so you can apply water, detergents and chemicals only when you need them

- Hydraulic solenoid valves and stainless steel flow-control and ball valves for reliability and repeatability in controlling motion

- Seals and sealing systems to offer you more sealing solutions and material options than any other supplier in the world

# Car Care Systems Application Guide

	Hydraulics Components					Pneumatics Components				Rubber & Thermoplastic Hose & Assemblies			Valves			Tube Fittings & Adapters			Tubing		Water Filtration			Seals & Sealing Systems	Push-to-Connect Fittings	Structural Framing Systems	Rotary Actuators
